## Press Release For Immediate Release

13 Jun 2007

### ImStrat Announces the New Geospatial Intelligence Individual Training Support Program and Schedule

Due to the high demand of ImStrat's training support programs, the executive of ImStrat Corporation has decided to schedule and offer its award winning training programs on an individual training basis. Select courses will be offered on specific dates over the next 12 months for individuals seeking certified training in Geospatial Intelligence Analysis. In addition to this, due to the increased need for RemoteView Professional Geospatial Intelligence Software training, this will be offered on a monthly basis by ImStrat's certified RemoteView Professional trainers.

Tom Last, President of ImStrat Corporation said, "Even though our large group courses continue to be our primary focus, it was felt some of our smaller international clients where not being given the opportunity to send individual personnel on course. Therefore, we developed this program for their specific needs in mind. In today's environment, we fully understand constraints many countries have both in terms of personnel and financial resources. This particular program has been created to overcome these specific issues, while at the same time ensuring their personnel obtains the necessary training they need to be successful."

For further information on ImStrat's New Individual Training Support Program and Schedule, visit [www.imstrat.on.ca](http://www.imstrat.on.ca) or contact the Training Support Group at [trg@imstrat.on.ca](mailto:trg@imstrat.on.ca) or on our toll free number (North America only) 1-877-269-5940.

### About ImStrat Corporation

**ImStrat Corporation** is a privately owned Geospatial Intelligence Analysis innovation solutions and training provider. These services are provided by some of the most highly trained Geospatial Intelligence Analysts on the market today.

ImStrats innovative solutions and training support programs expand the range of Geospatial Intelligence requirements. This includes but not limited to confidential analysis support for maritime surveillance operations, baseline intelligence product development for use in other geospatial database systems, to complete turn-key imagery intelligence analysis training support programs.
