Press Release For Immediate Release

15 June, 2007

TerraSAR-X Launched Successfully from Baikonur, Kazakhstan.

ImStrat Corporation is a Canadian partner of Infoterra GmbH for TerraSAR-X and Radar Training Support Programs

ImStrat Corporation is proud to announce the successful launch of TerraSAR-X on 15 June 2007. The nearly 3,000-pound satellite was launched Friday from the Baikonur Cosmodrome in Kazakhstan. The three-stage Dnepr rocket flew out of its underground missile silo at 0214 GMT (10:14 p.m. EDT Thursday) and successfully guided the spacecraft into a Sun-synchronous orbit, according to project officials. TerraSAR-X contacted a ground station in Kenya about 30 minutes after liftoff, confirming the craft was in good health following the ride to space.

ImStrat along with Canadian partner, TerraSAR Canada of Kanata, Ontario are proud to be working with Infoterra GmbH of Germany to bring to Canada the TerraSAR-X true 1 metre resolution X-band multi-polarized radar imaging satellite. This important satellite system, along with its follow-on SAR satellite TanDEM-X, will provide unprecedented satellite based high-resolution radar coverage around the world. No other planned commercial satellite will have a better resolution capability than TerraSAR-X.

TerraSAR-X will be a critical component to National Defence and Security issues both over land and within littoral regions of Canada. Using TerraSAR-X SCANSAR mode at 16 metre resolution, Strip map mode at 3 metre resolution and finally its Spotlight mode at a true 1 metre resolution, TerraSAR-X will not only be able to detect and recognize discreet objects, but also recognize discrete objects. Only TerraSAR-X will have this valid capability. TerraSAR-X will also be available for many commercial applications. Including urban analysis, agricultural analysis, forestry analysis and of course geological analysis for a wide variety of mining operations.

About ImStrat Corporation

ImStrat Corporation is a privately owned Geospatial Intelligence Analysis innovation solutions and training provider. These services are provided by some of the most highly trained Geospatial Intelligence Analysts on the market today.

ImStrats innovative solutions and training support programs expand the range of Geospatial Intelligence requirements. This includes but not limited to confidential analysis support for maritime surveillance operations, baseline intelligence product development for use in other geospatial database systems, to complete turn-key imagery intelligence analysis training support programs.

ImStrat also offers a complete range of commercial satellite imagery products ranging from Quickbird high resolution optical imagery to the soon to be released TerraSAR-X 1 metre resolution X-band radar imagery. Both are well suited for multi-sensor and temporal analysis operations.

For further information on how we can support you, please contact ImStrat Corporation at 613-257-5940 or email us.

About TerraSAR Canada

TerraSAR Canada (www.tsx-canada.ca) is a supplier of multi-mission Earth observation solutions, with an initial focus on applications of the high resolution radar imagery from the TerraSAR-X satellite. TSX Canada is the sole authorized Canadian agent of Infoterra GmbH, and we are currently performing infrastructure preparation and market development for the domestic and accessible overseas markets.

All likely consumers of high resolution all-weather day/night surveillance and intelligence products are urged to contact TSX Canada to reserve on-time and access priority for the post-launch period.
